

Exciting Electricity

Life Without Electricity

Electricity is a flow of charge through a material. We use it to power appliances.

What would life be like without electricity?

Look around you. Discuss ways things would be different.

- What would your classroom be like?
- How would you learn?
- What would your home be like?
- How would people stay in touch?

Task

- I would like you to imagine what life would be like with no electricity. This means no games consoles, TV's, tablets and other electrical appliances. Your task today is to design a green, sustainable house where there is no electricity. You need to draw what the house looks like and what it would have in it.

When you are designing your house please consider the following:

1. How will the people in the house occupy themselves? How will they entertain themselves when they have free time?
2. How would cooking duties be carried out? What would the kitchen look like?
3. How would people in the house contact others?

Task

- When you are designing your electricity free house make sure you include the following too:
 1. Label your house
 2. Remember to include the different rooms in a typical house (kitchen, living room, bedrooms and bathroom)
 3. Bring your house to life by adding colour
 4. Would this be a house you would like to spend time in? Try to justify your answer with reasoning.
