

Anywhere Island

Lesson 1: The Discovery

You are part of an environmentalist expedition and have come across an uninhabited, previously undiscovered island. This island is the most beautiful, natural place you have seen and is home to many species of flora and fauna unknown to man.

Where in the World Are You?

Use atlases, globes or interactive maps on the Internet to decide where you'd like your newly discovered island to be.

- Which sea or ocean does the island lay in?
- Is it in the northern or southern hemisphere?
- Which continent is the island associated with?

X Marks the Spot!

Use 'The Island Design Activity Sheet' for these activities.
Mark an **x** on your world map to show where the island is to be located.

Which countries and other islands
are closest to it?
How close are they?

The Location of the Island

e.g.

The island lays just off
the west coast of...

To the south of the island
is the country of...

It is in the _____
ocean/sea.

Designing the Island

Now is your chance to design the island.

What will it be called? What geographical features or landmarks will it have? As it is undiscovered, only natural landmarks will be there. What will you call these features?

Look at these maps for some inspiration...
